OUR SLOGAN: An Industrial Metropolis of Industrious People Who Pull Together.

Volume 17.

THE REDCLIFF REVIEW, THURSDAY, MARCH 7th, 1929

Number 1

Broad To Engage Another Teacher For School Staff

Have Received Approval of Estimates From The Commission

At a regular meeting of the S. 100 Board held last Monday evening a letter was read from the Utilities Commission approving of the estimates submitted by the Board for the year. The estimates provided for an additional teacher on the staff. The Board therefore decided to advertise at once for a new teacher and have one engaged as soon as possible.

This will be good news to those who have children going to school, as well as to the rest of the staff. There is no doubt U. S. but pupils and teachers have been greatly handicapped in the past because of the overcrowding in several of the rooms.

Planing To Pipe Gas From Cypress Hills

Negotiations Under Way To Run Line To Regina This Year

That the great desire of natural gas made in the Eagle Butte Co's well in the Cypress Hills is to be the forerunner of very extensive development, in that area, is borne out by the fact that the two interests are now making arrangements to have gas from that field piped to Regina and other and other Saskatchewan centres.

According to the Reg. Post representatives of the Roth interests have been in that city making plans for the construction of a natural gas pipe line from the Cypress Hills to Regina, a distance of 300 miles. It is expected this year will be commenced this spring and completed by next fall.

AMERICAN FARMERS ARE COMING TO ALBERTA

Letters reaching the Publicity Commissioners' office continue to indicate the interest in the opportunities for settlement in Alberta which is being shown by farmers in the mid-western states. The announcement is made in a letter from Nebraska, that ten farmers from one district in that state plan to come to Alberta early in the present spring with the purpose of purchasing from ten to fifteen sections of land.

ALBERTA FARMER FOR TARIFF ADVISORY BOARD

The Minister of Finance has announced the appointment of Frank S. Jacobs of DeWinton, Alberta, to the vacancy on the Tariff Advisory Board to succeed Hon. D. G. McKenzie who resigned some time ago. Mr. Jacobs is a farmer and a former editor of the Farm and Ranch Review.

General E. J. Higgins, the new Salvation Army leader, expects to visit Canada and United States soon.

To Start For Gold Near Medicine Hat

To Start Place, Trestling Along River Opposite Mitchell Ranch

Apparently the movement to start placer mining is going along the river opposite Mitchell Ranch. The new party will start in April. It is planned to start the drift on the gravel flats on the Anderson ranch which is about sixteen miles below the city and which is opposite the ranch of James Mitchell. The work will be done by a placer prospecting drill which has been purchased and which will soon arrive on the scene.

Herbert Hoover took the oath of office as President of the United States, last Monday. Mr. Hoover is the thirty-first President of U. S.

Churches

ST. AMBROSE CHURCH

Rev. J. L. Cooper
4th Sunday in Lent, March 10th.
Holy Communion 8 a. m.
Sunday School 10 a. m.
Evening 7:30.

Tuesday, March 12th, children, see their pastor after school.
Wednesday, March 13th, Sunday school teachers' meeting 7:30.
Thursday, March 14th, Women's society will address 7:30.
Friday, March 15th, Evening and service 7:30 followed by choir practice.

GORDON MEMORIAL UNITED CHURCH

Rev. W. B. Smith, Pastor
Sunday, March 10th.
Church School at 10 a. m.
Morning worship at 11:15. Subject: "The Message of the Book of Numbers." Evening worship at 7:30. Subject: "What is the Sanctuary of God?" What was the Psalmist's trouble? and why did he get relief when he went to church? Would a change of scene or a good show have lifted him out of his trouble as well as going to church?

The new auditorium will be opened a dedicated for worship on March 24th. Rev. Dr. Kerby, president of the Alberta conference, will speak at the morning service. Rev. R. Magowan, chairman of the Medicine Hat Presbytery, will speak at the children's rally in the afternoon at 2:30 and Rev. Dr. Powell, Superintendent of Missions for southern Alberta, will speak at the evening service.

CHURCH OF THE BRETHREN

Rev. Mr. Mulligan, Minister
ST. MARY'S CHURCH
UNIFIED FINANCE CAMPAIGN
Celebration of Mass, Second and Fourth Sundays of each month at 8:30 a. m.

Short Items of Local Interest

High something more about which to worry. Scientists predict that the end of the world is nine million years.

Members from all over the southern part of the province attended a district conference of the Women's Institute, in Medicine Hat this week.

Mrs. (Rev.) Smith, who is still in the Medicine Hat hospital where she underwent an operation, is now progressing nicely and is expected to be able to return home in a few days.

Sid Werts of the Imperial bank staff, has been confined by his bed for the past week suffering from throat trouble. During his illness W. Werns, of Moose Jaw, is taking his place on the bank staff.

Mrs. Tavel Laidlaw and children, who left the Almonte district, returning to reside in the States, returned to their old home last week and will remain there in future.

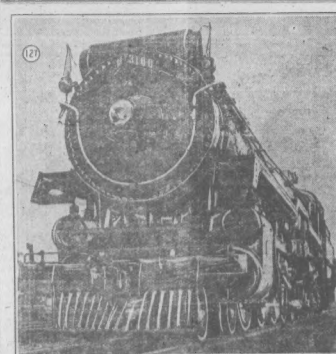

Gordon Memorial Church is now making preparations for the opening of the completed auditorium, which will take place on March 24th. Rev. Dr. Kerby will be present for the opening services.

Mrs. Sellhorn, Mrs. Stelman, Mrs. Fennell, Randolph, Mrs. Gulland and Mrs. Thacker attended the Presbytery in Fifth Ave. church, Medicine Hat, this week, as representatives from Gordon Memorial.

If farmers of the prairie provinces new poor, dirty send this year, it will not be because they have not been winnowed against it. Weeds and poor seed are doing the prairie farmers millions of dollars annually.

The large crowd which attended the Cameo last Monday and Thursday evenings, were delighted with the pictures shown. The acting of the dog trials, delighted young and old. Two more good pictures are billed for next Monday and Thursday.

By defeating Medicine Hat last Tuesday evening, the Balmain hockey team won the series which qualifies them to enter the next round of the provincial playoffs. The score Tuesday was 2 to 1, making it 6 to 3 for the series.

EMPIRE'S LARGEST

Built from designs originated in the motive power department of the Canadian Pacific Railway, the 3100 is the largest passenger locomotive in the British Empire and the most powerful. Canadian world's record was set by Angus Shoo, a graceful locomotive nearly one ton heavier than the best of the 60,000 pounds class. It has 2540 horse power. The use of Canadian nickel steel plates has reduced its weight to 24,000 pounds, but the high rate of tractive power to weight is a notable feature of the new engine. The boiler pressure, 275 pounds, is the highest in the world. The light drive wheels have a diameter of 75 inches and the cast nickel steel cylinders are 25 1/2 inches by 50 inches. The length over all of the new Canadian Pacific engine is 77 feet 6 inches. Two have been built at present for the Toronto-Montreal run.

Keep the date, April 6th, in mind. That is the date of the Stampede dance to be held in Cliff Hall.

J. T. Bell, a pioneer rancher of the Medicine Hat and Redcliff districts, died last Saturday. The funeral took place on Tuesday of this week.

D. McLaughlin has been awarded the contract for renovating the building recently taken over by the local Legion. He is already at work getting the interior in shape.

A meeting to re-organize the local Girls' Baseball Club will be held at the home of Miss Ivy Podesta on Tuesday, March 12th, commencing at 7:30 p. m. All interested are invited to attend.

Sam Clay, of Carmichael, is spending this town visiting friends. Mr. Clay is a pioneer of the west and spent some time in this district in the early days.

Karl Fairbairn, of Calgary, stopped off here last week end on his way home from Winnipeg to visit his parents, Mr. and Mrs. W. J. Fairbairn. Mr. Fairbairn was attending a conference of trust and mortgage companies in Winnipeg. The main purpose of the conference was a discussion of the business caused by weedy, dry farms. The issue is now at hand when it will be difficult to raise loans on such farms.

More Good Pictures Coming to Cameo

In a picture decidedly different from anything in which she has appeared in the past, Colleen Moore, whose First National star, comes to the Cameo next Monday in her best starring picture "Happiest Ahead." Although this production provides her with every opportunity to display her excellent face for comedy, Miss Moore will also be seen in moments of deep drama, in which she is said to have given an unusually capable actress.

Tarran, the wonder horse, of Ker Maynard's, who appears with Ken in his latest picture, "The Upstart Rider" will be shown at the Cameo next Thursday evening.

Surprise Party For Town Young Man

Who is Leaving to Accept a Position in Calgary

A number of friends gathered at the home of Mrs. Kerr, giving a surprise party in honor of her son James, who is leaving for Calgary for the purpose of taking up a new position. Among those present were a number of friends from Lethbridge. These were Messrs. E. Chaplin, J. R. McDonald, Neil McKenna, the great Unieka conifer, and Dr. Clancy. The refreshment hour was the most important part of the evening's program. Baskets, well filled with delicacies of every description, were brought from every corner as if by magic and all sat down to a most tempting lunch. After lunch the major conjurer entertained the crowd by magic tricks, piano solos and songs. The favorite song was "Lay My Head Beneath the Cross."

When the debate on the Canadian National branch lines was up in the Federal House, Dr. Gerhart put up a good argument for the completion of the Medicine Hat-Hanna branch. He was greatly appreciated the support he got from Hon. R. B. Bennett, the Conservative leader, and Robt. Jardine, the Progressive leader.

Here and There

(27) In 1910 the Canadian Pacific Railway's first mail was \$1,200,000, an increase of 432 per cent, working at it, 1920 at \$7,740,000 per year and \$14 per minute.

Dean Laird of Macdonald College, St. Anne de Bellevue, has won the past five years, consecutive, over fifteen hundred people through the west. This year he is planning a tour of inspection with special train accommodation.

The Jersey cattle sale of B. H. Bull & Son in Toronto the other day resulted in the highest average price for the breed yet recorded in the Dominion. Seventy-six animals averaged \$256. This included many yearling heifers and young bulls. The top animal, Hampton Bay 2-10, averaged \$315 and was the third highest price ever paid for a Jersey in North America.

Running down a timber wolf with a railway locomotive was the unusual sport tried near North Bay recently when a C.P.R. light engine hauled a 90 pound specimen. Engineer M. Lalonde on rounding a curve saw the wolf on the tracks a few minutes ahead, and spotting the thicket, succeeded in striking the beast with the pilot's engine. Conductor W. G. Waiter ran back and finished the animal with a poker. A bounty is paid on wolf skins by the government as the animals are a menace to game and livestock.

Canada now holds the world record for winter cruises. With one cruise around the world, another to South America and Africa, and a third to the Mediterranean and three to the Pacific, the Dominion has set a new record for the world. The Canadian Pacific is now in winter cruise and is expected to be added, making two to the Mediterranean, and extensive additions will be made to the itinerary of the "Empress of Australia" on her several cruises around the world, starting December 2nd.

The interest of the Prince of Wales in Canadian affairs was demonstrated recently when following his speech at Mansion House in London, he visited the British Industries Fair, and spent some time in examining the exhibits of the Canadian Pacific Railway. He took great interest in the moving train models and commented upon the artistic nature of the round the world cruise working model. Her Majesty the Queen, and Prince George passed along the same gallery and viewed the exhibit in the display.

One of the most colorful and eventful of the winter season in the west is scheduled to take place in Regina on March 23-24 next when the Great West Canadian Following, Polo, and Handicrafts Festival will be held in the Saskatchewan Hotel in Regina. Over 100 nationalities will be represented in the musical and dance contests and in the exhibits of handicrafts, and a number of artists from the west will be present. The contests are being arranged by the Canadian Pacific Railway in cooperation with the Conservatory of Music of Regina College.

Reson For Small Interim Payments

Pool Members Will Receive Best Average Price at Finish

In setting the rate for the first interim payment on 1928 Pool wheat a number of features must be taken into consideration by the central selling agency. Since the first year's operation of the Pool it has been the policy to make the first interim payments sufficiently conservative to permit the selling agency to continue a selling policy that in their opinion may produce ultimately the highest returns to the grower, unhampered by any turn the market may take, when a large volume of crop remains unsold. To pursue such a policy consistently throughout the whole season, the selling agency must be at all times in a strong financial and market position, should we at any time make too large an initial or interim payment, on any grade the net returns to the grower would probably suffer as a consequence. Further it is necessary to fix the amount of payment several weeks in advance of actual date in order to take care of the enormous labor required in balancing and closing the accounts of each grower and amassing cheques for payment. The Alberta Pool alone has nearly thousands of individual accounts, and this recent payment issued over 28,000 cheques, and the greatest care must be exercised to assure accuracy. It is absolutely essential that the Canadian Wheat Pool proceed carefully and on sound lines to insure the safety and security of its members.

Pool directors had a difficult situation facing them at date of setting this interim payment, with Argentine coming on the market with a very large crop uncontrolled in its marketing, and Australia producing fifty million bushels more wheat than last year. It has happened before where over-optimistic leaders of Pool organizations in other countries have gone ahead with liberal early payments, only to find that they were forced to sit heavily on falling markets in order to maintain the necessary margin which excessive payments had impaired. Should the Canadian Wheat Pool be forced at any time to liquidate any considerable part of their holdings, readers can well imagine what effect it would have on market levels. The Pool is functioning splendidly and when the next season closes our members will have received the best average price obtainable on the world's markets for their wheat.

REJECT MOTION FOR FEWER REPRESENTATIVES

Produce Growers' resolution calling for a committee from the Legislature to go into the re-distribution question, and stipulating that the number of members be as nearly as possible to the present number of 60, and not more than 65, was opposed by both Liberals and Conservatives. Mr. McQuibb's amendment that the representation be reduced from 60 to 45, was supported by Liberals, but was rejected by government supporters and later members. Mr. Shaw's motion asking for a uniform system of voting in both rural and urban constituencies, was declared out of order.

Education and Leisure

It has long been the boast of Western Canada that its people are intensely interested in education. With pride the people have drawn attention to the fact that in towns and villages the most outstanding structures are the schools, while the vast expanse of prairie has been dotted with rural schools, the number of which in the three prairie provinces now approaches that of the cities. The thousands of rural and village schools, larger public and high schools in the towns, still larger schools, collegiate institutes and colleges in the cities, and the three provincial universities, are but the visible expression of the determination of the people of the West that the children of this and future generations shall not only thus be "prepared for life," but that they shall come to realize that education is life, inasmuch as it is both the accompaniment and the experience of life.

It is said that education is entering upon a new era. No doubt it is, because in this changing world we are always entering upon new eras, and education must do likewise. The basic aims, the great objectives of education abide. Methods change and the setting varies, but it remains true that health is fundamental, the tools and techniques of learning are necessary; citizenship is inescapable, service is a radiant star, home is man's great joy, leisure is liberty, and character is humanity's highest good.

Education is not confined to school and college. It does not even begin there, and certainly it does not end there. School is but a means to an end. Through it certain knowledge is imparted, but if that were all our schools would be a dismal failure. At best, schools in imparting knowledge give us tools to use, and, to some extent, train us how to use these tools and others which we will use in our journey through life. But education is not passing examinations from one grade to another or the attainment of degrees. Education is a training of the mind and the body to enable us to meet all the joys and pleasures, the pains and sorrows, the duties and responsibilities, the vicissitudes of life, and put them all to the highest possible use.

An educated nation, it has been said, is one that has learned to pursue its interests to the end. It is a nation that has learned to overcome its prejudices until it has come to that, and to discover that every man has a contribution to make to the great society in the service of which he attains to freedom.

Five or six years ago, the National Council of Education held a great and noteworthy conference in Toronto, the theme of which was "Education and Life." In April next, it will convene another conference in Vancouver, with the general theme of its programme "Education and Leisure." The subjects for discussion by noted speakers and authorities from all parts of the world include: Literature; The Moving Picture; Music and the Drama; The Radio; Organized Play; Recreation; Hobbies and Handicrafts; Health in Relation to Leisure.

Life is divided into hours of work, and hours of leisure. It has, however, become customary to consider education almost wholly in terms of work, and little thought has yet been given to education in its relation to leisure. The Lord Chief Justice of England, recently said that "second only to drink, the real cause of crime is the difficulty of finding healthy recreation and instant amusement for the young." The free hours of a large proportion of youths and adults are occupied with harmful and trifling pleasures. We must realize that it is when the young are idle that they form the habits which may later ruin their lives.

Modern machinery which is steadily displacing man in the production of man's material needs, is producing an ever increasing number of leisure hours. Education in the present and future must concern itself with the provision and enhancement of leisure to occupy the leisure of both the child and the adult. There must be interests which education alone can give if men are to gain the faculty of using leisure easily, happily and fruitfully.

Such interests can be found in good literature, in music, in useful hobbies and handicrafts, in organized health-giving play and recreation. Organized games provide education in self-control. To "play the game" is instinctive to youth, developed to its fullest this natural gift becomes an asset of great national worth and importance in the evolution of a high type of citizenship.

Labour unrelieved by recreation produces fatigue, and fatigue produces idleness, lassitude and despair. Recreation undirected, unregulated, haphazard, produces vice, degeneration, and helplessness. Play is the natural expression of all the latent instincts. When a man is natural and at his best, it is his spirit that plays.

Parents and teachers may well give greater heed to the trend of these modern days, and devote greater and closer attention to the encouragement of proper use of the leisure hours of the children under their care.

The First Ten Pounder

Englewood News On Western Front
Intends To Purchase Land
Thomas Turnbull Fletcher, of Montreal, Englewood, described as the first ten-pounder to be purchased in Canada, found a place within twenty-four hours after reaching Winnipeg. Under the new scheme under which single British military units are to be stationed in Canada, the physical condition may obtain passages for ten pounds, Mr. Fletcher qualified, and is now being taken to Togo, Senegal, where, under the direction of the C.P.R. Colonization Department, it is a part of a plan to develop a new colony, and to use the capital and intends to purchase land.

Boys Kill Timber Wolf

Animal Attacked Them In Woods Near North Bay
Marshall King and William Hall, two pupils of the Chateaux Indian School, are in proud possession of the carcass of a large timber wolf which attacked them when they were driving through the woods with a sleighload of kindling wood. Inhabited by injuries sustained in the jaws of a stalled trap, the beast sprang upon the sleigh. The boys halted the horses and released the wolf with a shot of wood. Unable to make their horses move effectively, they jumped to the ground and continued their fight. Finally a well-aimed blow caught the animal on the head, killing it.

Teeth Weigh 300 Pounds

The largest tooth in the world, 11 feet 2 inches long and weighing more than 300 pounds, has just arrived at the Harvard Dental School Museum. It came from the jaw of a mastodon, and scientists estimate that it is more than 50,000 years old. Before the tooth was found in Alaska, the largest known specimen was the 9-foot one in the Carnegie Museum, Pittsburgh.

Minard's Liniment for the Grippe and Flu.

Using Radio To Send Fingerprints

Experiment Tried At Scotland Yard Is a Success

Experts at New Scotland Yard are carrying out experiments in the transmission by wireless of the photographs and fingerprints of criminals.

Remarkable success has already attended their efforts in the wireless flying of Vimys, the "complaints" and various high officials who have seen the results, have expressed their approval of the venture.

This application by the police of the latest outcome of electrical research, will, in time, have effect of far-reaching importance in the prevention and detection of crime, and in the thwarting and capture of criminals.

At present the description of a wanted man is sent either by post or telephone, to various police stations, and frequently the details are of a somewhat vague character; but, by the use of the wireless, the police can now get the details of a wanted man, and it is obviously less complete of a reliable photograph, and it does not convey the vital mental picture which is so helpful to every policeman.

One photograph with which an expert was made was that of a criminal named Brown, who murdered Police Constable Gutteridge, and the transmission was so good that the wireless picture was easily identified. Fingerprints of famous criminals have also been transmitted with equal success.

There are a long time before there is a chain of police wireless stations in England, but other countries are taking the step already. The police of the United States and America and the continent, and thus supply the authorities of various countries with the photographs and fingerprints of fugitive gangs of international thieves and whose arrest is desired.

Radio Staff Puzzled

Discovered Heads Worn By "Phantom" News Cams Of Vancouver

The mysterious reversion in the KGO radio studio at San Francisco, which caused so much of the station staff has been found.

After an expert piano tuner for hours in remedy the trouble of the station's plants were mumbled to appear and Ears Garlin was found guilty.

"Miss Garcia was 'ordered' to leave her hands at times when they played at the studio. Sensitive microphones picked up a note in pitch with the hands and sent the vibrations over the air.

Freedom From Asthma. Asthma is one of the most distressing troubles of the human race, and prolonged in its agony. Frequently men, things are tried, nothing seems to give hope of relief. Dr. Kelllogg's Asthma Remedy is the one help which can be depended on. If you have tried other remedies without success, get this and at once a package of this uniformly successful preparation.

"Should an airplane be referred to?" was an inquiring subject. All except the mail planes were excluded.

There may be other corn removers, but you will not be completely satisfied until you have used Hilb's Corn Remover.

If we dig down into the earth to a depth of about 25,000 feet we find a temperature of 200 degrees.

Need Continual Warning

Public Seem to Forget Menace of Love's Creeping

While the ideal thing would be to eliminate every level creeping in the country—and steps toward that are being taken—it will be many years before this menace to public safety is a thing of the past. In the meantime, the public must be continually warned.

If every person would get it firmly fixed in his mind that each level creeping is dangerous and that each one must be so regarded when approaching it, the death toll from this source will be materially reduced. Motorists cannot afford to fool with level creepings.

RHEUMATIC PAINS

DUE TO THIN BLOOD

Relief Comes Through the Use Of Dr. Williams' Pink Pills

The most rheumatic patients can hope for in rubbing something on the joints, aching limbs is a little relief, and all the while the trouble is becoming more firmly rooted in the system. The blood is the root of the trouble, and that is the reason why the blood is so important. The blood is the life of the body, and it is the blood that carries the food and the oxygen to the cells. If the blood is thin, the cells are starved, and the body is weak. Dr. Williams' Pink Pills are the best remedy for thin blood, and they will give you relief from your rheumatic pains.

There are thousands of former rheumatic sufferers in Canada, now well and strong, who have given their names to the Dr. Williams' Pink Pills. They are the best remedy for thin blood, and they will give you relief from your rheumatic pains.

Dr. Williams' Pink Pills are the best remedy for thin blood, and they will give you relief from your rheumatic pains. They are the best remedy for thin blood, and they will give you relief from your rheumatic pains.

Teeth and Health

Learn Why The Canadian Dental Hygiene Council and Published The Health-News Digest

THE GINGIVAE OR GUMS

Nature is a wonderful Mother and so it is that she has clothed the teeth with tissues that fit and wind about each tooth snugly like a protective garment. These tissues, then, that so ably protect the gums and support the structures from the gingivae or gums. When the tissues of the mouth, the gingivae stand out in importance because of the fact that while in health they are barriers to disease, when injured they become the portals of entry to infective processes that are ever assailing the body defense.

For this reason the maintenance of the gingivae in health, is of utmost importance. These tissues have no direct attachment to the tooth at its neck, and they are so designed that food brushed between the teeth does not follow their sloping surfaces to either side of the arch. Thus, all sources of debris which, in their decomposition, would give rise to offensive and disease-producing compounds, are prevented.

Countless numbers of tiny fibres, embedded in the gingivae, pass to and fro in all directions and give them their firmness and elasticity. When suffering through injury, or other cause, these fibres become weakened with consequent displacement of the gingivae exhibiting a lack of tone.

The gingivae are particularly rich in blood supply as is evidenced by their color. By this means there is provided the rapid repair of tissues, following upon the frequent minor injuries and scrapings that they are subjected to in the chewing of food, and in the use of toothbrushes.

As a minor injury, yet where subjected to continuing and repeated irritation, a mild inflammation is set up, progressing, leads to more serious disease that at last becomes a menace both to the teeth and to the health of the individual.

Sweet and palatable, Moberg's Great Water Extractor is so acceptable to children, and it does its work sure and promptly.

Menapans are less neither of weight, nor of height, in comparison with other jungle inhabitants.

so I started taking them and I can truthfully say I am a different woman altogether. I only took two boxes.

Sparrrows at Mayence, France, are artistic. Before building nests they wait for an annual rose carnival, then make their homes with corn-celt picked up from the streets.

The most important phase of vocational education in development of Canada is the use of aircraft in mineral exploration and development.

FOR NEURALGIA

BAYER

ASPIRIN

You doubtless depend on Aspirin to make short work of headache, but remember that it's just as dependable an antidote for many other pains. Neuralgia? Many have found real relief in an Aspirin tablet. Or for toothache; an effective way to relieve it, and the one thing doctors are willing you should give a child—of any age. Whether to break up a cold, or relieve the serious pain from neuritis or deep-seated rheumatism, there's nothing quite like Aspirin. Just make certain it's genuine; it must have Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Aspirin; it does NOT affect the heart

Aspirin is the trade mark registered in Canada's Industrial Rights Commission. While it is well known that Aspirin makes no difference to the heart, the public is often misled by the name "Aspirin" which is used by many cheap imitations.

A married man says that he was always fond of tongue—and he likes it still.

Minard's Liniment prevents Flu.

Theory About Sun Spots

Are Believed by Some to Affect Weather, Crops and Health.

For scientific meetings seem able to slip by nowadays without reference to sun spots. Two years ago, when the American Association of Scientists met at Philadelphia, a Russian correspondent, disconcerted his sober colleagues by ascribing to the ebb and flow of these solar blemishes the majority of social misfortunes from epidemics to wars. Last year at Dublin the same association listened to less spectacular but sounder accounts of relations between the sun spot curve and such things as yields of crops and weather and the proportion of ultra-violet rays in sunlight.

Now comes Dr. Alfred J. Lotka, with his suggestions that traces of the same sun spot fluctuations are discernible in vital statistics, the records of births and illnesses and deaths. Of Doctor Lotka's own remarks there were no criticisms. Statistical relations undoubtedly exist. The only fear is that persons less coldly logical than Dr. Lotka, taking meanings both more definite and more mystical than present knowledge justify.

The chief characteristic of the sun spots is their periodicity. It is probably not yet safe to speak of a cycle, for that word implies regularity, and the numbers of sun spots apparently wax and wane at intervals varying between seven and eleven years and about 15 years. Eleven and a half years, commonly called the cycle number, is merely a rough mathematical average. Nevertheless, there undoubtedly is periodicity, although perhaps complicated by many cycles instead of one. There is no doubt that this affects human life, probably in the main indirectly. Solar heat unquestionably varies slightly in amount, increasing roughly with the number of sun spots and decreasing when those wane. This presumably affects plant growth; it has been detected, indeed, in the growth rings of trees. Perhaps it affects also such things as the germination of vegetables and the vicissitudes which such foods contain.

It has been proved that fur-bearing animals of Canada increase and decrease in number according to the same cycle, and wild animal diet is a more probable cause than weather. About the possibility of cycles of illness roughly corresponding to those of sun spots scientists are sceptical, but there is no reason to imagine these agreements either simple or direct.

Vital statistics are averages. About a single individual they mean nothing. Only when normal variations of diet and infection and other health factors cancel out may one expect a small residual due to solar change. No one need fear, therefore, to be older baldness in sun spot years than in others, nor need the world give credence to mystical relations between sun spots and by-work activities with emanations from Father Sun. Against conscious inquisitions there need be, of course, no objection, except where it is confined with science. Soft-bodied egos are good enough if they like them. Accidents happen only when one takes them believing that they are hard.

She: "Well, you do at least know where your next meal is coming from."

Her Husband: "I've always a good idea—from some confounded tin!"

Bachelor Girl: What do you take most now that you're married and settled down?

Wife: My husband.

One smile is worth a dozen frowns at any stage of the game.

Do nothing when you are angry and you will have less to undo.

You are only 16 and want to marry a daughter? Can you afford to keep a family?

"Father—I have charge of the petty cash box at the office."—Dorchester, Berlin.

W. M. U. 1772

No Satisfaction Gained

Taking Revenge for Wrongs Fared or Real Does Not Pay

Revenge, whether taken or otherwise, doesn't pay. This was demonstrated in the case of a Chicago traveler who waited and watched for five long years to return to a reporter a phony half-dollar which had been given him in change. The world would regard this as an "avenge" in fact, would probably look upon it as "justice," as did the victim.

But it didn't pay, just the same. The other day, the man who had carried the phony half-dollar for five years met the man who gave it to him, but instead of returning it he gave him a \$10 gold piece in mistake. In other words, he got by far the worst of the deal.

It is ever thus with those who harbor the spirit of revenge or cultivate the desire to get even. They lose. It may not always be money; often it is something more valuable, the gift of nobility of character. But a man can nurse a grudge without losing much that is worth while. It mitigates against that which would be a grudge and of spirit which are so essential if one is to live a full life. It begets meanness, malice and spitefulness, which are so detrimental to a happy, useful, manly life.

No man should revenge his own wrongs, which are so detrimental to a happy, useful, manly life. It begets meanness, malice and spitefulness, which are so detrimental to a happy, useful, manly life. It begets meanness, malice and spitefulness, which are so detrimental to a happy, useful, manly life.

Most Farm Produce Consumed in Canada

Exceptions Are Wheat, Rye, Barley, Cheese and Apples

What becomes of all that vast volume of milk, butter, eggs and other products produced each year upon Canadian farms? With few exceptions almost every commodity is sold or more per cent. consumed at home. Complexions among these exceptions are wheat and rye, cheese, apples and apples. The official figures show that during the crop marketing year 1927-28, just over one-quarter of the rye, approximately the same of cheese, two-thirds of the wheat and two-thirds of the apples were used in Canada and the remainder exported. Barley is also an exception, though not to the same degree, slightly over one-quarter of the crop was exported last year of the year before that about two-thirds.

In most other lines home consumption took by far the greater part of the production. The figures show: cattle, home consumption, 16 per cent; pork, 94; beans, 86.5; potatoes, 92; turnips, 86; hay, 99; butter, 99; eggs, 99. Of fresh apples, 90 per cent, eggs all but a million dozen out of a total of over 250,000,000.

Some Queer Superstitions

The Welshman trudging to market with a basket of eggs takes care to pack an odd number to ward off accident and disaster. If two people carry the same basket, each taking hold, they will grow either to love or to hate each other.

The Indians believed that a maple twig at the bottom of a full basket would bring fair weather.

To keep good luck with you, place on the right side of a broom if it runs north and south; on the left side if it runs east and west.

Should leave, now or twigs fall on you from the trees, you may expect a letter.

If you are at tea and there are not enough spoons to go around, then those who share will bring each other luck.

A white star in the center of the forehead of a horse is a sign of good luck.

Taken Heavy Toll

In the building of a railway line in French Equatorial Africa 17,000 negro laborers have died from disease, privation, and exposure. As only 87½ miles of single track have been laid, this works out at nearly 200 lives a mile. In the Belgian Congo 750 miles have been laid out at a total cost of not more than 2,000 lives.

Joe—There's only one thing that keeps the wolf from my door now.

Joe—What's that?

Joe—I ain't got no door no more!

Low Sound Not Heard

At Certain Pitch It Is Just Felt, Says Professor

When a sound gets too low it ceases to be heard and goes into the region of feeling, a strange tingling sensation being felt in the ear. This was one of the many interesting facts revealed in a lecture on "The Ear and What It Does," delivered by Professor Alexander Woodruff of Emmanuel College and lecturer in physics, University of Cambridge, at the Institute of Electrical Engineers, in London.

The tingling sensation, said Professor Woodruff, could also be felt in the tips of the fingers if held over the origin of the sound. This normal ear could hear about 300,000 tones, varying in loudness and pitch. "We still hear the expression, 'pricking up one's ears,'" he said, "although only animals can do that, now that humans have grown out of the habit of their ancestors."

I know some boys who still boast that they can move their ears up, but I would advise them not to boast of the fact, since it betokens a close resemblance to their hairy forefathers. The ear was almost unobscurely sensitive and easily damaged. It is a marvellous dispensation of Providence," he continued, "people get less sensitive to shrill, high-pitched sounds as they get older, but by the time they come to enjoy such noises they cease to hear them."

In reference to vibrations and acoustics, Professor Woodruff said that any army walking over a bridge might cause the bridge to collapse if the men did not break step, "because," he explained, "their steady tread might just fit the natural pace of the bridge."

In the same way, a singer is quite capable of breaking a glass vase by the resonance of his voice.

Life's Dividends

We Get Nothing More Out Than We Put In

We got out of time what we gave it. If we treat it as but the means to a guiding wealth, reputation, or pleasure, we shall obtain nothing more out of life, though we may easily gain much less. Success in these things may lead to a sense of disillusion in the consciousness that after all, what we have gained is a poor return for life's investment, since it must all be taken from us at the last.

If, however, we put love of goodness, desire of truth, the ambition to serve others into our time, we shall find that it renders more than adequate returns in the recompense of a life identified with virtue and an influence which inspires others to still higher attainments for themselves and others.

Has Highest Per Capita Income

A recent report, giving Alberta's wool output for 1928 at 1,492,181 pounds and that of the Dominion at 3,648,254 pounds is misleading, these figures being, in reality, the year's handling of the Canadian Co-operative Wool Growers' Association. The correct wool production figures for 1928 are: Alberta, 2,033,111 pounds, and the Dominion 18,672,766 pounds.

Already Counted

"\$500 a year is all."

"Then with the \$500 I allowed my daughter you will have—"

"Oh, I have reckoned that in."

FOG CAUGHT TRAIN WRECK

This picture shows the remains of a locomotive buried in the wreckage of freight cars after it had been struck by a passenger train from Bristol to Nottingham, England, in a heavy fog. Four members of the crew were killed and 25 persons were injured.

An Important Discovery

Many Plastics Materials Made Stronger

Discoveries and inventions are so numerous in these latter days, and so much progress-agoing, that announcements of their vastly important, even revolutionary, character have almost ceased to be regarded. Experience has revealed the fallacy of such claims as often that the average citizen now contents himself with the Missouri or Aquiliferian attitude of "wait and see." Nevertheless, occasionally it happens that the story is circumstantial enough to arouse more than a passing curiosity and prompt the hope that what the claim is the reality will be. Of this latter number is the report from London concerning "the most important metallurgical process since the discovery of steel."

London is the scene of this latest product of research and experiment. It enables substances that are non-conductive of electricity to be electrolyzed, so that wood, silk, porcelain, paper and all metals can henceforth be coated with a surface of low-conductivity metal. As a result of the treatment, even such flimsy materials as cardboard or plywood can be made as strong as steel.

Relative to the corrosive action of steam, heat, chemical fumes and water, it is declared. Fortification of the frail fabrics of airplanes and airships to the strength of steel, and solution of the builders' problem by entirely metallizing craft of every description, are among the claims made for the new invention. "Woodwork and textiles can be similarly metallized," it is asserted.

While the full significance of all this is yet to be determined by a few more laymen, some way or other it has quite a big sound.

Made in Canada Goods

People Should Support Home Industries As Far As Possible

If every Canadian, as the Labor leader says, could be induced to press a preference for Canadian-made articles and to put it in practice, unemployment would be an unknown condition in this country and there would be room in Canadian industry for many more workers than it now supports.

How about practicing such a preference for Canadian goods during the new year? There may be some articles which it is necessary for us to import from other countries that are large purchasers of our own products, in view of the fact that they are not made or grown in Canada itself, but there can be no doubt that every year Canada is consuming a large quantity of imported articles which are made just as well in this country by Canadian manufacturers employing Canadian workmen.

The made-in-Canada movement is today just as worthy of support as it was at the time of its introduction at the commencement of the century.

Figures Were Misleading

A recent report, giving Alberta's wool output for 1928 at 1,492,181 pounds and that of the Dominion at 3,648,254 pounds is misleading, these figures being, in reality, the year's handling of the Canadian Co-operative Wool Growers' Association. The correct wool production figures for 1928 are: Alberta, 2,033,111 pounds, and the Dominion 18,672,766 pounds.

Paras Animals In 1705

The number of animals in Canada in 1705 was about as 12,523 cows, 14,732 young cattle, 22,716 ewes, 28,022 sheep and 25,502 swine. Governor Carleton in his report on manufactures mentions the wool industry as one of the most important.

Why the (Under) Old Lady?

"Old Lady," where did those large rocks come from?

Importance Of Rubber

Usefulness In Looming Needs Is Worth A Good Deal

Rubber is one of the most common and useful commodities of the present day. The quiet home is the rubberized house. Rubber mats of all sizes and shapes, from doormats to table mats, put the soft pedal on every thing from footstep to platform. The rubber sink lining reduces the clatter of washing up, and it is now possible to obtain a sink lining in rubber that is quite sanitary, being easily cleaned with boiling water. It will not spoil or chip the surface of the sink, as enamel sinks frequently do.

A rubber soap-dish that acts upon the suction principle is useful for both bath and sink. Slight pressure on the suction cup, and the dish is fixed firmly to the side of the sink. Even one cuts out a little noise, as you may observe next time you hastily place a cake of soap in an enamel holder.

Rubber staps and wedges for rattling windows and banging doors are more efficient than other kinds and are of great use in the home.

Rubber household gloves give protection to more senses than one. No one need fear electrocution arising from leakage in electric cleaners and the need for a pair of gloves and rubber gloves are worn whilst handling any such electrical domestic appliances.

"Foreigners" In Canada

English Speaking People Could Learn Many Things From Them

J. Bruce Walker writing in London Speech says: "There are those who attempt to stir the foreign people of Canada, and some of them do it under the guise of a great religious fervor. I am not at all sure that the foreign population of Canada is Canada—no Britisher is—but I am equally prepared to say that the foreign population of Canada has added much to its art, its music, its crafts and its education. Canada has been built up by the recognition of the rights of people who are other than British. She is a bilingual country, set solidly upon the rock-bottom of an English and French foundation, as solid as the heights of Quebec, and those of us who know the so-called 'foreigners' at close quarters have been struck by a few things that even our English brother could afford to contemplate—sobriety, industry, thrift, cleanliness, loyalty to the British flag."

Lacked Experience

The best man was doing his best to make the groom brace up. "Where's your nerve old man?" he asked. "Why, your shaking like a leaf."

"I know I am," said the groom. "But this is a nerve-racking time for me. I've got some excuse to be frightened, haven't I? I've never been married before."

"Of course you haven't," soothed the best man. "If you had you'd be a good deal more scared than you are."

To Produce Registered Seed

Method Explained by Professor F. J. Harker, of Missouri Agricultural College

An experiment station or individual farmer selects from an approved variety one or more plants that are typical of that variety. The seed from these plants are increased and tested under approved plant breeding station to determine that they are true to variety. The seed from this is then sold as Elite stock seed. It is quite evident therefore that the supply of Elite stock seed is very limited. The grower must depend upon supply from the experimental station or from the product of hand selected seeds. The Elite stock seed produces first generation registered, and this in turn second generation registered, and so on. The generation number indicates the number of times the seed has been selected from the pure Elite seed. Consequently the lower the number the purer the seed will be and the higher value.

In the production of registered seed the field must be inspected by a member of the Dominion seed branch and the seed for sale must be inspected for germination, and sent it to the sack.

For every farmer has the desire or the training to become a registered seed grower, but every farmer must know the advantages of registered seed. It will be noted that even in registered seed, the most valuable is that nearest to the Elite seed; so if registered seed was sown over the whole farm, it would not be long until it were again polluted with weeds and other grains. If every farmer would buy certified registered seed this spring to sow five or ten acres of one of the main cash crops—wheat, oats or barley—he would have sufficient seed from this to grow his whole farm next year. The next year buy certified registered seed of another kind of grain of another seed field of five or ten acres, and the following year repeat with the third kind of grain. After this he can again use registered seed of the crop that he started with. In this way he can produce his seed always within three years of his registered seed.

Britain's Largest House

Boasts of Having a Room for Every Day of the Year

The largest residence in Great Britain is believed to be Lord Fitzwilliam's Yorkshire seat, Westwist Woodhouse. It said that the three principal entrances are so far apart from each other that visitors are advised to take their shoes and hats to be kept at each point of access.

The house, which is 600 feet long, was a hall in which the average suburban villa could comfortably be placed, and it boasts of a room for every two days of the year.

China and Canada

The Calgary Herald says: "The Chinese desire to learn from the re-establishment of friendly relations between Great Britain and China. We have a large and growing trade with the new republic, including wheat supplies, and are in an excellent position to supply Chinese needs in many lines of trade. If the new government succeeds in uniting China and replacing banditry by civil law and progress, this country will be the greatest beneficiary."

Tribute To Founder
Of Scout MovementBoy Scouts Of World To Honor
Memory Of Sir Robert Baden-Powell

As a tribute to General Sir Robert Baden-Powell, founder of the Scout movement, and in celebration of the twenty-fifth anniversary of the founding of the movement, the 10,000 Boy Scouts, representing four thousand nations, will encamp at Birmersham, near the village of Lavenham, England, from July 31 to August 14. It is expected that 1,000 Boy Scouts of America, representing every part of the world, will attend.

Although the actual length of the International Jamboree Campment will be fifteen days, due to the fact that Scouts will be visiting Europe from all parts of the world, there will be Boy Scouts travelling on educational tours through Europe during the whole school vacation period.

Instead of competitive games, which were a part of the previous International Jamborees, the jamboree this year will take the form of a world-wide camp, or series of camps, in which Scouts from each of the countries represented will take part in their own countries. It is proposed to make this the greatest peace-making camp yet held in the history of the world and the purpose of the jamboree is to foster the feeling of brotherhood between the Boy Scouts of many nations.

The International Jamboree will also take the form of a tribute to Sir Robert Baden-Powell, first Scout of the world, who twenty-one years ago organized his studies of youth and his scouting experience at Birmersham and organized the first troop of Boy Scouts.

Prospect Bright In Alberta

Outstanding Year Is Looked For
By Leading Industries

Alberta's year for 1923, in common with that of all Western Canada, is one which holds out unprecedented development and hope for the future. His Honor, W. G. Egbert, Lieutenant-Governor of Alberta, declared at Winnipeg in a recent interview.

More than 22,000 persons had been employed in the province during the year, he declared, almost doubling the population.

While Alberta's marketing of coal was still a very real problem, one considerable highway had been made in this industry, and Dr. Egbert looked forward with confidence to the period for shipment to London from three months a year to six months as a favorable indication.

His honor forecast considerable development of water power in the near future. He referred to the great work being done for development of the Spray Lakes. Power service was being extended from Edmonton to the north and rural districts to the south especially.

Help Would Be Welcome

Prosperity Enjoyed In Canada Should
Make People Generous

The British Government, staggering under the burden of taxes never before known by any other nation in modern history, has done all that was humanly possible in the way of providing state safeguards against the conditions which now prevail. Yet stark poverty stalks through the land, and semi-starvation and exposure have combined to make an attack on a people which a disease epidemic would change into a tragedy that would stir the entire British-speaking world. Circumstances beyond the control of the British people are responsible for their adversity; circumstances largely beyond our own control have made it almost too unpropitious to be able to extend a helping hand at once.

Toronto Globe.

How He Understood It
One day, in the third grade reading class, the teacher was telling a story of a dog and a fox. When she came near the end of the story she said, "And the cunning fox jumped up on the stone wall and ran along it, and the dog lost his scent."

When she finished the story she called on the little Italian boy in the class to explain the story. "Jon started all right, but as he came to the end of the story he said, 'And the cunning fox, he jump up on de stone wall an' run along it, an' de dog, he loss his penny!'"

"The Father—Well, Johnny, don't you want to come in and see the new little car that the boss brought you, last night?"

"Four-year-old—'Nope, but I'd like to see the stork.'"

W. N. U. 1772

Reduce
the Acid

Rich, stomachic, acid stomachs and indigestion usually mean excess acid. The stomach nerves are over-stimulated. Too much acid makes the stomach and intestine sour.

Alkali kills acid instantly. The best form is Phillips' Milk of Magnesia, because one harmless, tasteless dose neutralizes as many times its volume in acid. Since its invention, 50 years ago, it has remained the standard with physicians everywhere.

Take a spoonful in water and your unhappy condition will probably end in five minutes. Then you will always know what to do. Crude and harmful methods will never appeal to you. Prove this for your own sake. It may save a great many disagreeable hours. Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting stomach acids. Each bottle contains full directions—any drugstore.

And it has been wholly developed to English experts.

(1) Shipyard. The three great shipyards of the world are in the British Isles—at Glasgow, Newcastle and Belfast. Apart from one shipyard in Germany, there is no other shipyard in any country that can be placed in the same class with the "Big Three" of Great Britain. The largest American shipyard is a child's playground in comparison with the yards between the British Isles.

(2) Carriers' Factory. If a prize were offered for the most perfect and unique factory, it would not go to America. It was opened in the New Carriers' Factory in London.

This factory is an industrialized copy of the Temple of Babylon, a golden city of ancient Egypt. It makes machines to suit its own climate. Its machinery is so automatic that it makes \$2,000 net profit a year per worker. It has created new standards of comfort and hygiene for its workers.

(3) Laundry Factory. In spite of all the improvements that have been made in the humanizing of industrialism, this factory is still as hot as the sun.

This is the only factory, so far as I know, that is managed by the laborer. It has the power of its rank and file. It is the only one that has received 25,000 suggestions from its workers. It has been practically self-governing for more than 20 years.

If you want to see the ripened flower of industrialism, you must go to Cadbury's.

(4) Underground Station at Piccadilly. This is London's latest achievement. It was opened in December. There is nothing else like it in any country.

This station has 11 escalators. It has a vast booking hall with display walls that show the latest fashions. It handles 50,000,000 passengers a year. It is a subterranean marvel, so deep that it could hold the highest statue in London—the Statue of Liberty in Trafalgar Square.

So on you can see, there are no Big Things nor industrial marvels in any country that are superior to those of Great Britain. What Britain does lack is the art of self-advertisement that has been an highly-developed elsewhere.

After all, skyscrapers are not the only things that are big. They are the measure of the progress and enterprise and development of any country. Frequently, we forget this fact.

Largest at World

The Canadian Government's Economic Plan system, now comprising twenty-seven farms, seven substations, one horse-breeding station, one fox ranch, ten plant pathological laboratories, and 201 illustration stations at different points in the nine provinces of the Dominion, is the largest of its kind in the world.

"His wife will be a peach."

"She still is. She's a peach."

Reached in the operation of railways' Remo."

FLU Germs Breed
In the Throat.

This Appears As A Common Cold, But Gains Tremendous Headway

SOME SIMPLE PRECAUTIONS AGAINST INFLUENZA

Simple precautions taken now will enable you to fight dreadfully "flu" which is sweeping rapidly through the whole country. The germ of influenza gain access to the body through the mouth and throat. Keep the throat healthy and you go a long way towards stopping the trouble. An effective means of prevention is to gargle the throat three or four times daily with Merivale's Throat and Mouth Wash. This is a most efficient gargle.

The germ-killing properties of Merivale's Throat and Mouth Wash destroy any bacteria in the mouth or throat. If the throat is sore, if the throat is hoarse, if you have a cough—be sure to rub the neck and chest with Merivale's Every drop of it will rub in, and out will come the congestion.

Of course it is absolutely necessary to keep clean the system with Dr. Hamilton's Pills, which stimulate the system, and rid the system of disease-breeding germs. This combination treatment of Merivale's and Dr. Hamilton's Pills will give prompt and entirely satisfactory results.

Christie's Biscuits
The Standard of Quality Since 1853

Safest and best for Children or Invalids because they are Christie's Arrowroot Biscuits.

In the store or on the phone always ask for

Recipes for 100 Week

(By Betty Barclay)

GRAPE MOLD

- 5 tablespoons quick-cooking tapioca.
- 1/2 teaspoon salt.
- 1 pint hot grape juice.
- 1/2 cup sugar.
- 1 cup shredded pineapple.
- 1 cup quartered marshmallows (if desired).
- 2 egg whites.
- Lady fingers or strips of sponge cake.

Cook tapioca and salt in the hot grape juice in a double boiler 15 minutes, stirring frequently. Stir in sugar. Remove from fire and add pineapple. When partially cooked, stir in the marshmallows (if desired), and fold in the stiffly beaten egg whites. Arrange split lady fingers around sides of a glass-bowl or around individual sherbet glasses. Pour in mixture and chill. Serve with whipped cream. Lady fingers or sponge cake may be omitted.

MACARONI WITH OYSTERS ON FISH

- 6 ounces macaroni.
- 1/2 teaspoonful salt.
- 1/2 teaspoonful pepper.
- 2 tablespoonful butter or a substitute.
- 1 pint oysters.

Cook the macaroni until tender in boiling salted water, drain, then season with the salt, pepper and butter. Oil a baking dish and put a layer of macaroni into it, then a layer of oysters which have been carefully picked over, more macaroni, more oysters, and so on until the dish is full. Pour the liquor from the oysters over the top—there should be a cupful of this liquor—if there is not enough make up the deficiency with milk. Bake twenty minutes in a moderate oven—350 degrees F.—and serve with tomato catsup.

Cold left-over fish may be substituted for the oysters if desired, using soft-boiled or milk for the milk.

In this instance, she has been trying to sell man's shoes.

The Carnival Of Noise

Much of It Is Unnecessary and Could Be Eliminated

The present high peak of street noises has been reached so gradually, that many persons have not fully appreciated the fact that they are allowing others to inflict upon them and have not stopped to consider whether, in fact, the various components that make up the existing pandemonium are really necessary and unavoidable. Each new addition has been accepted with astonishing complacency. The unattended motorcycle, the hansom, the heavy lorry, the airplane, the steam tractor and the pneumatic drill, have been tolerated in turn. Each of these noisy inventions has been turned loose without let or hindrance and people have ceased to marvel at them or to wonder what diabolical invention engineering science will thrust upon them next.

Sore Coughs Drop Off If You Use "Pulman's"

When you notice any sign of cold, hoarseness or cough, don't wait until the time to point on a few drops of PULMAN'S COUGH EXTRACT. Do this, and you prevent croup. No matter if the cough is hard or soft, let it be on top or between the throat. Pulman's will remove it without pain. It is a sure cure for COUGHS, BRONCHITIS, CROUP, COLIC, TRACHEITIS. It does the work—and more, and the cure, quickly and without pain.

A Clever Idea

The Durban Chronicle tells of a young man who visited a store in that town, purchased three dozen eggs on credit, took them to another store and sold them and used the money to buy gas for his car. This is probably the first instance of a thirty-six-hour power automobile.

Use Mink's Lament for the Flu.

May Be the Reason

Women's feet are now two sizes larger than they were twenty years ago, according to an orthopedic expert. In this instance, she has been trying to sell man's shoes.

Little Help For This Week

"Give us this day our daily bread."

Master, help! From hour to hour, Lord, I need Thy moving power. Not to aught tomorrow's wages. Not to bliss tonight's repose. Now I hunger to be fed. Now I weary Thy daily bread.

Every moment hold my hand; Without Thee I cannot stand. Now may I feel the place to tread; Step by step I may be led.

Give me all the love I need; Give me all the love I need.

What is this bread, O my God? It is not merely the support which Thy providence supplies for the necessities of life; it is also the nourishment of truth which Thou givest each day to the soul. It is the bread of eternal life, giving it vigor, and making it grow in faith. Thou dost renew it every day. Thou givest within and without precisely what the soul needs for its advancement in a life of faith and renunciation.

For whatever happens to me each day is my daily bread, provided I do not refuse to take it from Thy hand and feed upon it.

A steadily increasing group of words making its way into the dictionary is that of dialectal, provincial and local words and expressions.

An official report states that five hundred kinds of material are used for men's shoes.

WINDOLITE The Improved Glass Substitute

COMES WITH A MESSAGE OF HEALTH

THE new is all-powerful life producer. Nature's universal disinfectant and germ destroyer as well as all-around and tonic. WINDOLITE is the surest most important ally.

Medical research has definitely proved that from the point of view of health and hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and death.

Science has further established that ordinary window glass does not allow the passage of Ultra-Violet rays, so that by using glass we are actually excluding these vital health-giving rays. The solution of WINDOLITE has completely satisfied the long felt want.

Substantive research has conclusively proved that it is a most effective substitute for glass that it freely admits the Ultra-Violet rays, and that it has a most beneficial effect on the growth and development of plants and children and on the well-being of cattle, enabled for the first time to live in a natural state of darkness in their sheds.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized glass-making, given a new stimulus to poultry breeding, increasing the egg-laying capacity and fertility of chickens, has greatly improved the health of sheep and is being used in domestic and household requirements.

WINDOLITE stands for 100 per cent. sunlight. It makes light let strong windows, catfish sheds, dairy stables, poultry houses, brooders and all out buildings. It is economical, unbreakable, flexible and is easy to cut and fit.

It is now being successfully used for sunrooms, verandas, schools, factories, hospitals, sanitariums, hot beds, plant coverings and greenhouses. It keeps out cold—will not crack or chip—cuts with an ordinary pair of tin snips. WINDOLITE is supplied in rolls six feet high but in one width of 24 inches only. A square yard of WINDOLITE weighs 15 lb. in one width. A square yard of glass of ordinary thickness, weighs about 125 to 130 lb. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, f.o.b., Toronto.

Maintain The Quality Of Alberta's Crop

BETTER SEED

—MEANS—

Better Yields, Better Grades, Better Prices

A special committee appointed by the Minister of Agriculture, in co-operation of numerous organizations in the province, is urging the use this spring by farmers throughout the province of

High Quality, Clean, Treated Seed Grain

In order to reduce the heavy annual losses sustained by sowing inferior seed.

Farmers can co-operate by:

1. Using registered seed whenever available.
2. Using at least high quality commercial seed.
3. Having seed tested for germination and purity.
4. Treating seed for smut.
5. Thoroughly cleaning all grain for seed.
6. Seeding only varieties of recognized quality and varieties suitable to the district.

Good seed will be in demand this spring. Secure your requirements early—before the supply is exhausted.

U. F. A. Local, Boards of Trade, The Wheat Pool, Banks, Commercial Grain Firms, The Press, and many other organizations are working in co-operation with a—

BETTER SEED COMMITTEE

consisting of representatives of the Provincial Department of Agriculture, the Dominion Seed Branch, the Canadian Seed Growers' Association, the Alberta Seed Growers' Association, the C. P. R. Agricultural Department, and the University of Alberta.

D. A. McCONNEL

Provincial Publicity Commissioner, Secretary.
